CIVIL ENGINEERING / CONSTRUCTION / PROJECT DELIVERY

ABDULSALAM OLAWALE SANUSI

CIVIL ENGINEER | SITE ENGINEERING | CONSTRUCTION & SITE MANAGEMENT

BUILDING WITH PRECISION. DELIVERING WITH PURPOSE.

A practical record of engineering judgement, site execution and project coordination across residential, structural, foundation and infrastructure works.

4+ YEARS OF PROGRESSIVE EXPERIENCE

Residential construction • Reinforced concrete • Foundations • Retaining walls • Finishing • Cost planning • Materials coordination

SELECTED PROJECTS & CONSTRUCTION EXPERIENCE

01 / PROFESSIONAL PROFILE

Engineering judgement, grounded in site execution

A project-facing portfolio for employers, clients, collaborators and delivery partners.

Civil Engineer with over four years of progressive experience across structural design support, building and infrastructure construction, and site management. Practical experience spans residential developments, multi-storey reinforced-concrete works, foundation activities, retaining walls, indoor sports facilities, adaptive reuse and finishing delivery.

I work at the point where drawings, materials, trades and site conditions meet: coordinating people and resources, monitoring workmanship, identifying constraints early, recording progress and escalating decisions that require specialist approval.

4+	232 m	12	95%
years of experience	reinforced retaining wall	person site team led	reported first-inspection approval

Selected residential construction project

High-end residential development — external façade, glazing, balcony and driveway finishes visible at the photographed stage.

My value

- Site delivery: practical coordination of site teams, subcontractors, artisans, suppliers and work sequences.
- Quality and safety: workmanship monitoring, QA/QC awareness, inspection readiness and HSE-conscious execution.
- Commercial awareness: material planning, BEME preparation, cost analysis and progress reporting.

02 / CAPABILITIES

Practical support across the project lifecycle

Experience is presented by capability and supported by project-specific evidence in the following pages.

STRUCTURAL & CIVIL WORKS

- Reinforced-concrete construction and concrete placement coordination
- Foundation and substructure activities; pile-foundation exposure
- Retaining-wall construction and roadworks support
- Structural and architectural design support; technical reporting

SITE DELIVERY & CONTROL

- Site supervision, surveying and setting-out
- Work sequencing and progress tracking
- Coordination of contractors, artisans, suppliers and specialist trades
- Finishing works, external development and close-out coordination

QUALITY, SAFETY & DOCUMENTATION

- QA/QC checks and inspection readiness
- HSE monitoring, risk awareness and issue escalation
- Workmanship monitoring against drawings and specifications
- Site records, progress updates and technical reporting

COST & PROJECT SUPPORT

- BEME preparation and cost planning
- Cost analysis and material/resource planning
- Material delivery coordination, including sharp sand and granite
- Stakeholder communication and practical constructability feedback

Technical toolkit

Software: AutoCAD, Orion and Microsoft Office Suite. Additional tools recorded in prior portfolio materials include SketchUp and Google Workspace. Site methods include surveying and setting-out with a dumpy level, site inspection, concrete-work monitoring and progress reporting.

A disciplined working approach

Understand the scope → coordinate resources and sequence → monitor quality and safety → record progress, communicate constraints and close out actions.

03 / RESIDENTIAL CONSTRUCTION

High-End Residential Project

Indigem Homes Limited | Lagos, Nigeria | Current role recorded from 2025

Site-supervision experience across high-end residential development, including six fully detached five-bedroom smart homes. Work spans construction and finishing activities, with coordination of trades, suppliers and site teams to maintain progress against drawings, specifications and agreed quality expectations.

Scope of contribution

- Coordinate daily activities, work sequencing and interfaces between subcontractors, artisans and suppliers.
- Carry out and support surveying/setting-out activities, including foundation layout using a dumpy level.
- Monitor workmanship and raise practical constraints or discrepancies for resolution with the relevant parties.
- Supervise finishing and external works including false ceilings, tiling, painting, compound development and stamped-concrete works.
- Coordinate specialist works and follow up on outstanding items affecting access, sequencing or completion.

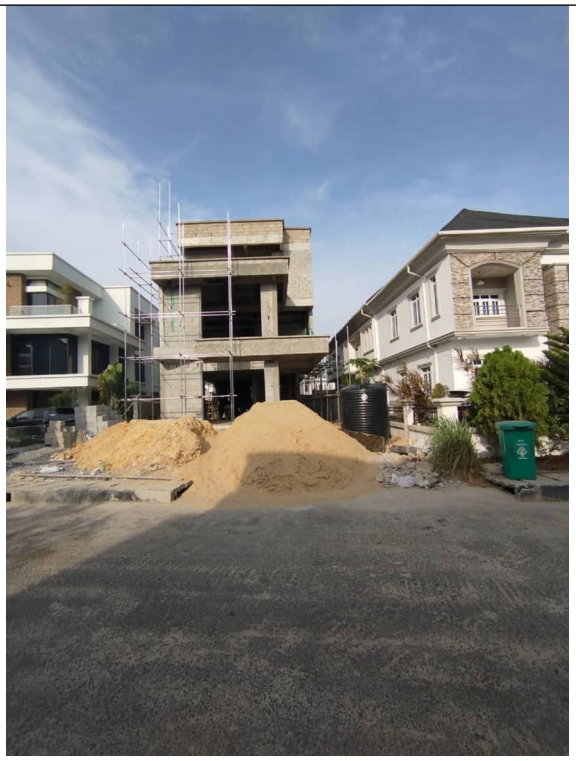

Construction & External Finishing Works

Residential construction — site progress.

Residential works at an earlier construction stage.

Detached residential development — advanced external stage.

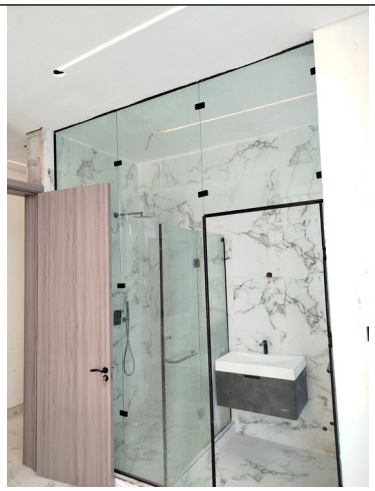

High-end residential façade and external approach.

Internal Finishing Works

Kitchen joinery and countertop installation.

Bathroom fit-out: glazing, wall finishes and vanity.

Ceiling finishes and integrated lighting details.

External Amenities & Compound Finishes

Swimming-pool tiling and surrounding external works.

Evidence note: photographs show selected visible stages and finishes; they do not imply that every unit was complete, commissioned or handed over.

04 / MULTI-STOREY & FOUNDATION WORKS

Seven-storey residential development

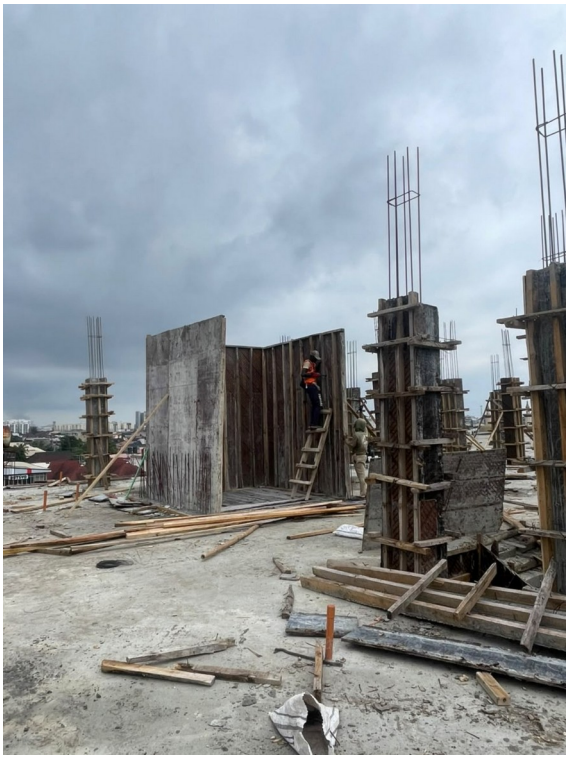

Indigem Homes Limited | Lagos, Nigeria

Site-supervision experience from pile-foundation commencement through reinforced-concrete superstructure works, up to the fifth-floor level at the stage recorded in the CV. The work required attention to sequencing, temporary works, materials, workmanship and coordination across successive structural activities.

Site responsibilities

- Monitor progress through foundation and superstructure activities.
- Coordinate daily site activities against drawings and project requirements.
- Observe workmanship in reinforced-concrete elements and associated formwork/temporary works.
- Support sequencing, material coordination, issue reporting and site communication.

Pile Foundation, Setting-Out & Structural Works

Multi-storey reinforced-concrete frame under construction.

Foundation reinforcement and substructure activities.

Site access and vertical construction activity.

Physical 3D architectural presentation model — design/presentation evidence.

Foundation layout and substructure activities.

Reinforcement arrangement at foundation stage.

Slab and structural works at the documented construction stage.

Project progress

Project progress

Project progress

Project progress

Technical checks such as reinforcement details, concrete strength and temporary-works adequacy must be verified against approved drawings and inspection records; photographs alone do not establish compliance.

05 / INFRASTRUCTURE & REINFORCED CONCRETE

232-metre reinforced retaining wall

OLAG Nigeria Limited | Lagos, Nigeria | Nov 2023–Dec 2024

Supervised construction of a 232-metre reinforced retaining wall for an airport hangar facility. Responsibilities included directing concrete-casting operations, coordinating material supply with consultants and vendors, and leading a 12-person construction team while monitoring engineering and HSE requirements.

Delivery contributions

- Directed and coordinated concrete-casting operations.
- Coordinated material supply and delivery with consultants and vendors.
- Led a 12-person construction team and monitored engineering and HSE requirements.
- CV-recorded safety outcome: zero lost-time injuries throughout the project lifecycle.

Surveying, Excavation & Subgrade Preparation

Surveying and setting-out at the retaining-wall work area.

Excavated formation and subgrade preparation ahead of blinding.

The photographs above document the retaining-wall preparatory stages shown: surveying and setting-out, followed by excavation and subgrade preparation. They are not presented as direct photographic proof of the full retaining wall or its completed condition.

Retaining-wall preparatory sequence

Survey and setting-out → excavation to formation → subgrade preparation and compaction → readiness for blinding concrete. Levels, dimensions and compaction results should be confirmed by the relevant site records and tests.

06 / SPECIALIST FACILITIES & ADAPTIVE REUSE

Specialist construction and conversion projects

Selected experience in facility coordination and transforming existing spaces to meet new functional requirements.

Indoor padel court facility

Indigem Homes Limited | Lagos, Nigeria. Supported coordination of an indoor padel-court construction fit-out involving a specialist Portuguese team. The project required coordination between the site environment, specialist installation activities and associated building works.

Steel-frame construction.

Indoor facility under construction.

Specialist installation activity.

Interior enclosure and fit-out progress.

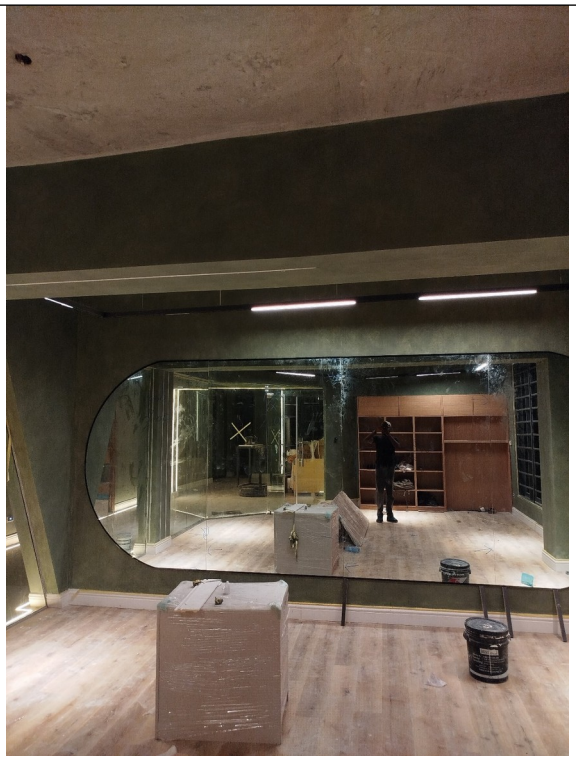

Steel roof framing — construction stage.

Steel roof framing — alternate view.

Warehouse conversion to studio

HRPS / project experience as recorded in the CV and prior portfolio materials. Experience includes supporting renovation works to convert a warehouse space into a studio, coordinating building works and interfaces with existing conditions. The photographs below are grouped specifically as warehouse-to-studio interior conversion and finishing evidence, separate from the padel-court facility.

Studio interior finishing.

Glass partitions and interior details.

Finishing-stage interior view.

Glazed entrance, door hardware and arched interior corridor.

07 / MATERIALS, ROADWORKS & PUBLIC-SECTOR CONSTRUCTION

Construction delivery beyond the building

A combination of field coordination, materials logistics, infrastructure exposure and site-team leadership.

Materials delivery and quality awareness

Experience includes coordinating delivery of sharp sand and granite and paying attention to whether supplied materials match the required type and intended construction use. Material acceptance should be based on project specifications and appropriate checks, rather than appearance alone.

Sharp sand delivery to site.

Granite aggregate stockpile/delivery.

Road construction & cost planning

Department of Works & Infrastructure, Akure | May–Oct 2021: supported supervision of a 700-metre bituminous road within a residential estate, including material-quality monitoring and progress reporting. Horasis Construction Limited: prepared a BEME for a road construction project valued at $200,000 and supported cost planning.

OLAG Nigeria — Council Secretariat

Government project | Three-storey council secretariat. Led a 12-person site team and supported supervision of structural and associated construction activities in coordination with consulting engineers.

PROJECT PROGRESS

OLAG Nigeria — Council Secretariat Project

Project note: The project was commissioned by the Governor of Lagos State.

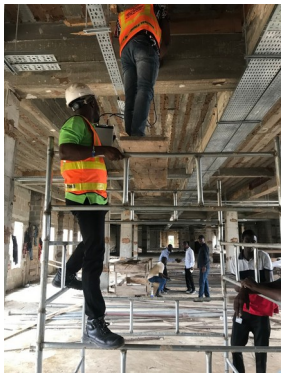

Project progress

Project progress

Project progress

Project progress

Structural frame and blockwork.

Reinforcement and slab preparation.

Concrete placement with pump.

08 / ADDITIONAL EXPERIENCE & CREDENTIALS

A broader civil engineering foundation

Complementary design, construction, QA/QC and reporting experience across earlier roles.

HRPS Construction Limited | Feb–Oct 2023

Implemented QA/QC procedures with a reported 95% first-inspection approval; supported site safety, engineering documentation, construction activities and cost analysis.

Horasis Construction Limited | Mar–Dec 2022

Developed architectural and structural designs for a three-storey building and supervised execution from foundation through first-floor construction. Other assignments included supervision of a nine-unit duplex estate, structural assessments and engineering reporting.

Education

B.Eng. Civil Engineering — Federal University Oye-Ekiti, Nigeria | Second Class Upper Division (2:1).

Research: “Structural Performance Evaluation of Concrete Containing High Dosage of Pulverised Termite Mound as Partial Replacement of Fine Aggregates.”

Professional development & affiliation

Member, Nigerian Society of Engineers (NSE). Training listed in CV: Supervise Health & Safety on Construction Projects (2022); Workplace Incident Investigation (2023); Risk Assessment for Engineers (2024); Introduction to Project Management (2021).

How I contribute

A practical, coordination-led approach: interpret the scope, plan and sequence activities, coordinate resources, monitor workmanship and safety, document progress, and escalate decisions that require specialist review or approval.

09 / COLLABORATION

Let’s discuss the project

Dependable engineering and site-delivery support for teams that value practical coordination, clear communication and disciplined execution.

I welcome conversations with developers, contractors, consultants, employers, business partners and investors seeking construction experience, project support or a reliable delivery collaborator. Depending on the opportunity, engagement may be structured around employment, contract site supervision, design support within an agreed scope, project coordination or a defined collaboration.

Potential collaboration areas

- Site Engineer / Project Engineer opportunities
- Building construction and finishing supervision
- Structural and architectural design support within an agreed scope
- Concrete, foundation, retaining-wall and infrastructure works
- Project coordination, estimating, BEME preparation and technical reporting
- Materials planning, supplier coordination and site-delivery support

Portfolio note

This portfolio summarises experience supplied in the CV and project materials. Project attribution, dates, responsibilities and outcomes should be confirmed against relevant records before public distribution. Photographs illustrate visible work stages and do not by themselves establish completion, compliance, formal acceptance or design sign-off. Design deliverables and approvals remain subject to agreed scope and applicable professional requirements.
